

SUPPORTING ENVIRONMENTAL SUSTAINABILITY BY RESPONSIBLE USE OF WATER AND ENERGY

Cilacap, 12 May 2023, PT Pan Brothers Tbk (the Company) proved its responsibility and commitment to environmental sustainability by receiving 2 (two) awards for the 2023 Energy and Water Saving Movement which was included in a series of Earth Day commemoration events in Central Java Province.

As a form of responsibility to the Earth, sustainable earth management is a top priority that must be carried out together. To make this happen, the Central Java Provincial Government collaborates with the Central Java Energy and Mineral Resources Agency (ESDM) in organizing a series of Earth Day commemoration events, which are celebrated globally every April 22. This year, the Earth Day commemoration was held on May 12, 2023 at ABC Field in Bulupayung Village, Kesugihan, Cilacap Regency with the theme "Invest in Our Planet through Sustainable Mining".

The Earth Day commemoration event involved mining businesses, electricity businesses, energy businesses, and business groups that have used renewable energy. At this celebration, the Good Mining Practice (9GMP), Energy Independent Village (DME), and Energy and Water Saving Movement (HEA) awards became an important agenda given to parties who were instrumental in supporting and implementing sustainable practices. In an effort to support the commitment to achieve Net Zero Emission by 2060, the 2023 Energy and Water Saving Movement Award was held as a form of appreciation for community participation in energy and water conservation, as well as a means to publicize energy conservation practices among industries and high schools in Central Java.

PT Pan Brothers Boyolali and PT Prima Sejati Sejahtera are the two companies that received the HEA 2023 award, in recognition of their support and commitment to the national decarbonization target. Both companies have implemented various initiatives and work programs in water and energy use management. Starting from the formation of sustainability committees, water and energy saving programs, to the use of solar panels which is one of the leading initiatives. Hopefully, the synergy of sustainability implemented within the corporate body can become an example for other textile and apparel industry sectors in Central Java.

Together, let us build a better future through decarbonization and a real commitment to the environment!
